96 port LC Fiber Optical Pre-terminated Patch

Panel

Product No:LFP196-50

Ver. 06/20

Product Specification.

DESCRIPTION

The fiber-optic LC-type 96-port patch panel features a high-density modular design, low insertion loss and high return loss, fully meeting the 10G Ethernet transmission requirements, and is used in IDC and building fiber pre-termination systems. Upgradeable to MPO high-speed connectors for smooth upgrades of future 40G/100G system applications. The high-density layout greatly saves space in the cabinet, improves cabinet utilization, and creates value for data center construction.

APPLICATION

- Pre-terminated: Pre-install LC modules group on 1U patch panel, to reduce the workload and damage rate at the construction site and improve the installation efficiency at the construction site.
- High density: 1U patch panel can load 8pcs modules, each with 12pcs adapter, totally 96pcs adapter.
- Front and rear two-way removable: The modules can be disassembled front or rear, convenient for installation and maintenance.
- Universal: The patch panel can be used for CAT7, CAT6A, and CAT6 modules or SC, LC modules.
- Dust prevention and protection: Dustproof and humanized design, ensure no dust entry and damage during installation.
- The LC adapter is internally assembled with a 100% high quality ceramic (zirconia) sleeve for extremely reliable centering, repeatability and low insertion loss.
- The LC adapter structure conforms to the optical fiber industry standard and the international IEC standard, and is applicable to various connection devices of the optical fiber LC type.
- Compatible with 19" rack, cabinet and wall mount.
